Supporting antimicrobial stewardship  
using point of care CRP testing

Tuesday 22 November 2022, 1pm – 2pm GMT (8am – 9am EST)

Hosted by **X Talks online**

November 18-24th is World Antimicrobial Awareness Week. Tackling antimicrobial resistance (AMR) requires a multi-faceted approach and research has shown how incorporating CRP testing into clinical practice may help to limit antibiotic use to only those patients with severe (bacterial) infections<sup>1</sup>. Dr Rogier Hopstaken, a GP from the Netherlands, will discuss how

implementing CRP testing at the point of care has the potential to curb the problem of AMR and help change antibiotic prescribing behaviours in primary care settings. We will also review case studies and explore the benefits of portable CRP\* testing with patients in community settings using the LumiraDx Platform technology at the point of care.

**Dr Rogier Hopstaken**

MD, PhD.  
Star-shl Diagnostic Centres,  
Etten-Leur, Netherlands.  
Institute

**David Barber**

Advanced Practitioner  
LHCH Knowsley Community  
Respiratory Service

**Dr Matthew Fay**

Medical Director  
LumiraDx

**Lucy Lehane**

Associate Director,  
Medical Affairs  
LumiraDx
